

Sprint 2 Overview

During Sprint #2, our team had the task of creating our own version of Spotify Wrapped for our festival SXSE. The main challenge we faced was the fact that most of us were not familiar with HTML or CSS, which were essential tools for creating the web-based platform we were tasked with building. To overcome this challenge, we decided to learn the basics of these languages and also sought help from other resources available to us.

Additionally, we faced the obstacle of having to pivot from our original plan after two days of work due to an error we couldn't fix, which would have made our initial plan non-viable in the long term. Despite these challenges, we persevered and managed to produce a deliverable that we are proud of.

In terms of the sprint deliverables, we created a web-based platform that displayed the top artists of the SXSE festival. This included features such as a search function, a list of top artists, and a data visualization of the artists' popularity. Throughout the sprint, we went through several iterations of the platform, starting with rough drafts and sketches and eventually arriving at a final product that was functional and visually appealing. Overall, we successfully tackled the challenges we faced and delivered a high-quality product that met the requirements of the project.

Sprint 2 Deliverable

As part of the project, we were tasked with creating a personalized SXSE Wrapped, and I must say, the end result is pretty awesome! We put together a music player that not only displays our personalized SXSE Wrapped but also allows us to play the songs right from the platform. It was a challenging task, but our team worked together tirelessly to make sure that everything came together seamlessly.

Aside from the music player, we also created some pretty neat data visualizations that showcase the different trends and insights from our Wrapped. It was great to see the data come to life and to be able to share it with others. Overall, I'm proud of what we were able to accomplish in such a short amount of time. It was a great learning experience and I'm looking forward to applying what I've learned to future projects.

This link leads to the our personalized SXSE Wrapped. Please click around and play with our site a little!
